Contents

1   package-manager

Manage the install/update/uninstall of Pandoc extras (filters, templates, etc.)

1.1   Install

To install pandoc-extras, open the command line and type:

```
pip install git+git://github.com/pandoc-extras/package-manager.git
```

- Requires Python 3.2 or later.
- On windows, the command line (`cmd`) must be run as administrator.

1.2   To Uninstall

```
pip uninstall pandoc-extras
```

1.3   Dev Install

After cloning the repo and opening the pandoc-extras folder:

`python setup.py install` installs the package locally
`python setup.py develop` installs locally with a symlink so changes are automatically updated
